

FastViewer GmbH

ADVANTAGES OF OWN SERVER SOLUTION

Cloud or In-House?

In addition to the free choice of the server location of our cloud version (location exclusively in Germany, Europe-wide or worldwide), we offer our customers the opportunity to communicate with FastViewer via their own infrastructure.

This offers many advantages, e.g. in terms of security, functionality and customizing.

On the following pages we have summarized the most important benefits for you.

Advantages of own server solution

Security and privacy

As the own server is operated in your environment, you determine the security settings of the server. You can determine the availability of the server in your IT structure, depending on the location. You can use the solution exclusively internally – or via your DMZ – for external access.

Securing the data stream

You are free to set up a system that can only be operated internally in your IT structure. Thus the user data never leave your network.

WebClient

With the own server solution, the WebClient can be customized to your CI.

Detailed evaluations

With our LogViewer you get detailed evaluations about the use of the rooms and their participants. Thus, you can optimally adapt the use of the system to the user's usage behavior.
Who/When/Where with ...

Advantages of own server solution

Use of our API interfaces

You can integrate our solution into your solutions. Thus, it is e.g. possible to integrate our solution into support tools, booking systems or other software. Whether it is an existing system on your intranet, or you want to create your own booking portal on the internet. (XML-RPC / ASP / COM interface)

Free choice of database

By using your own server solution, you determine the location of your data, e.g. on an existing SQL cluster.

Multi-tenancy

The server can be converted to a tenant server. This enables you to manage your internal or external customers as mandates.

Limitation of the used version

You can determine which version of FastViewer is running on your server. Thus you can „freeze“ a version or provide a certain version as minimal version.

Let us advise you

If our advantages have convinced you, we will gladly provide you with a test version.
